Shivam Singh

Staff Software Engineer | Application & System Architecture |
Distributed Systems | .NET • React • Azure | Security • AI
Bengaluru, Karnataka, India

Summary

I'm a Staff Software Engineer focused on designing and building secure, scalable and distributed software systems. My core stack is .NET/C#, React/TypeScript and Azure, with experience across application architecture, distributed systems, identity and security, event-driven architectures, cloud infrastructure and enterprise application development. I enjoy solving engineering problems that sit beyond an individual feature — defining service boundaries, designing authentication and authorization flows, building asynchronous systems, handling stateful workloads, improving scalability and reliability, and making architectural decisions that remain maintainable as systems grow. My recent work has also involved application security, hardware-backed identity using TPM, OAuth/OIDC-based architectures, cloud-native systems and AI-assisted engineering workflows. As a Staff Engineer, I work across implementation and architecture: reviewing designs, identifying systemic risks, guiding technical direction and helping turn complex requirements into practical engineering solutions. I'm particularly interested in software architecture, distributed systems, application security, cloud platforms and applied AI.

Experience

Gleason Corporation

5 years 2 months

Staff Software Engineer

April 2026 - Present (6 months)

Bengaluru

- Architect and build secure, distributed enterprise applications across .NET, React and Azure, spanning cloud and customer-hosted environments.
- Drive system design across identity, authentication, authorization and application security, including OAuth 2.0/OIDC, OpenIdDict and hardware-backed device identity using TPM.

- Design scalable asynchronous architectures using Azure Service Bus, distributed workers and stateful processing workflows, including systems that require long-running sessions and callbacks.
- Work across application and infrastructure boundaries to solve scalability, reliability and deployment challenges in complex engineering software platforms.
- Provide technical direction through architecture reviews, design discussions, code reviews and implementation guidance across multiple components and services.
- Explore and integrate AI-assisted engineering and LLM-based capabilities where they provide practical value while maintaining deterministic validation and sound engineering practices.

Core technologies: .NET / C#, React, TypeScript, Azure, Azure Service Bus, SQL Server, Redis, Docker, OAuth/OIDC, OpenIddict, TPM, CI/CD

Senior Software Engineer

August 2021 - March 2026 (4 years 8 months)

Bengaluru

- Designed and delivered enterprise applications using .NET/C#, React/TypeScript and Azure, working across frontend, backend, APIs, databases and cloud services.
- Built and evolved distributed application workflows using Azure Service Bus, SQL Server, Redis and containerized services.
- Designed APIs, service integrations and authentication/authorization flows for applications spanning cloud and customer-hosted environments.
- Improved application architecture by separating responsibilities, defining service boundaries and reducing coupling between components.
- Worked on production systems involving asynchronous processing, long-running workflows and integration with engineering applications.
- Contributed to technical design, code reviews, troubleshooting and production issue resolution across the application stack.
- Built deployment and CI/CD workflows using Azure DevOps, Docker and Azure Container Registry.

Core technologies: .NET / C#, ASP.NET Core, React, TypeScript, Azure, SQL Server, Redis, Azure Service Bus, Docker, REST APIs, OAuth/OIDC

Freelance

Freelance Solidity Developer

July 2020 - September 2025 (5 years 3 months)

- Develop and experiment with Solidity-based smart contracts and blockchain applications.
- Work on contract logic, integration patterns and blockchain-focused proof-of-concepts.
- Explore practical use cases around decentralized applications and token-based systems.

Core technologies: Solidity, Smart Contracts, Web3, Blockchain

DealerSocket

Software Engineer

November 2019 - August 2021 (1 year 10 months)

Bangalore

- Worked as a Full Stack Developer within the CRM Engineering team, contributing to the development of DealerSocket Blackbird CRM for automotive dealerships.
- Developed application functionality across frontend and backend technologies using React, Angular, TypeScript, .NET and .NET Core.
- Collaborated within the product engineering team on ongoing CRM development and feature delivery. Core technologies: React, Angular, TypeScript, .NET, .NET Core

Allscripts

3 years 2 months

Associate Software Engineer

September 2017 - November 2019 (2 years 3 months)

Bengaluru

- Analyzed user stories and functional requirements, estimated development scope, and translated requirements into technical solutions.
- Prepared technical design specifications and implemented application features with accompanying unit testing.
- Participated in code reviews, design reviews and technical discussions with the development team.
- Collaborated with business analysts and product owners throughout development, including sprint planning, refinement and product demonstrations.
- Supported production releases, investigated defects and contributed to POCs and technical spike work for new solutions.

Intern

October 2016 - August 2017 (11 months)

Bengaluru

- Supported the development team with requirement analysis, coding, debugging and unit testing.
- Assisted in preparing technical documentation and participated in code/design discussions.
- Contributed to sprint activities, product demonstrations and investigation of development issues.
- Worked on POCs and spike tasks to explore technical solutions.

Education

Annamalai University

Bachelor of Engineering (B.E.), Computer Software

Engineering · (2012 - 2016)
